

# TUBTARA®

## Blind rivet nuts

# catalogue

Acquisition of Visserie Guerry (Brussels) by Dejond  
New optical control machine

2015

EN 9100:2009 / AS 9100C accreditation for the aerospace  
**TUBTARA®** 60 years of innovation!

First to cold form Tubtara's in stainless A5 & A6

2013

New coatings, development of the watertight HX **TUBTARA®** in stainless 304 & 316

Year dedicated to R&D despite the tough economical situation worldwide

2009

New heading machine for production of more difficult parts

Important investments in the production e.g. new degreasing and tapping machines

2007

First to cold form blind rivet nuts in stainless steel 316  
Zinktop: Dejond's new Cr<sup>VI</sup>-free surface treatment

2004

ISO 9001/2000 accreditation by BVQI (Bureau Veritas)

Opening of an extension to the production facility

2000

First to cold form blind rivet nuts in stainless steel 304

1989

Dejond becomes one of the first European manufacturers producing cold formed blind rivet nuts

1966

Launch of the **TUBTARA®** blind rivet nut

1938

Dejond starts to manufacture solid rivets

1901

Foundation of the company by the family Dejond

## About Dejond : Metal Matters

Started as a small metal stockist in 1901, Dejond turned into a leading supplier to the industry, renowned for its high know-how in metal. About 100 employees are dedicated to offer tailor-made solutions and establish the long term partnerships with their customers and suppliers around the globe.

### Core business :

- stockkeeping wholesaler of non-ferrous metals with service center,
- distributor of exclusive systems for architecture and building,
- industrial supplier of high quality, value-added mechanical fasteners and fastening systems,
- R&D, production, marketing and sales of **TUBTARA®** blind rivet nuts.

Considerable investments over the years helped Dejond to strengthen its position of trendsetter and solution provider.

Dejond's name stands for high quality products, a multi-industry supply, prompt order processing, on time deliveries and a reliable (after-sales) service. It wants to play a leading role in product developments, always focused on the current and future needs of the users.

**METAL MATTERS** : Dejond does not only deliver metal products, it primarily offers a committed customer partnership.

### ● Dejond: the industrial specialist in fastening technology

On its home market Dejond has become a major player in fastening technology by offering a full range of high quality mechanical fasteners manufactured by different internationally recognized suppliers, including its own **TUBTARA®** blind rivet nut range. It serves the general, automotive and aerospace industries.

Thanks to the regular product trainings at the suppliers, its in house expertise and the continuous search for new products, Dejond's people are able to keep pace with the latest market requirements & trends. In strong partnership with its suppliers, Dejond tries to solve its customers' problems and offer the appropriate product for their specific applications.

**In other words : offer a total quality solution.**

Dejond is **EN 9100 certified** for the distribution of high value fastening systems, a special requirement of the aerospace industry.

### ● Visserie Guerry

Visserie Guerry, manufacturer of high-tech screws since 1924, has become a Dejond company in 2015. Thanks to its extensive market knowledge and experience in cold forming, Visserie Guerry serves an array of customers with technically advanced products. A perfect fit with the Dejond vision.

## TUBTARA®: Riveting Matters

In 1954 Dejond launched its first **TUBTARA®** blind rivet nuts, machined on a lathe. Only 10 years later the production started specializing in cold forming technology. Today Dejond offers one of the widest, cold formed ranges of high quality blind rivet nuts in the world, all manufactured in its EN 9100 certified production facility in Wilrijk (Belgium). **TUBTARA®** is Dejond's registered brandname.

Besides standard and customized blind rivet nuts, the Tubtara Division also concentrates on cold forming selected parts according to customers' drawings for very specific applications.

### Quality guaranteed

The entire Tubtara team is involved in quality assurance and more than ever committed to meet the challenges that lie ahead. Living up to its social and ecological responsibilities, it tries to create a balance between economical, social and environmental aspects by manufacturing in an environment-friendly way.

Upon specific request of its aerospace customers, the Tubtara division upgraded the existing ISO 9001 quality management system to the higher EN/AS/JISQ 9100 level in 2014. The certificate helps Dejond to meet the most stringent customer requirements and strengthen its position in the aerospace industry that imposes strict safety standards and controls to ensure a reliable quality.

### 60 years of innovation

Over the last 60 years the Tubtara Division has established itself as a pioneer in the production of blind rivet nuts, based on a long tradition of innovations and new products. It has been able to use its deep knowledge of materials and cold forming production processes to constantly develop its product portfolio.

The Tubtara team begins its next 60 years with a clear vision :

- high and consistent quality performance,
- innovation and in-house R&D,
- customer partnership through technical and commercial support,
- worry-free deliveries.

**TUBTARA®** has the ambition to stay at the forefront of the design and manufacture of blind rivet nuts. It wants to play a leading role in future developments and will continue to invest in R&D.

## TUBTARA® : Riveting Matters

## TUBTARA® Blind rivet nuts

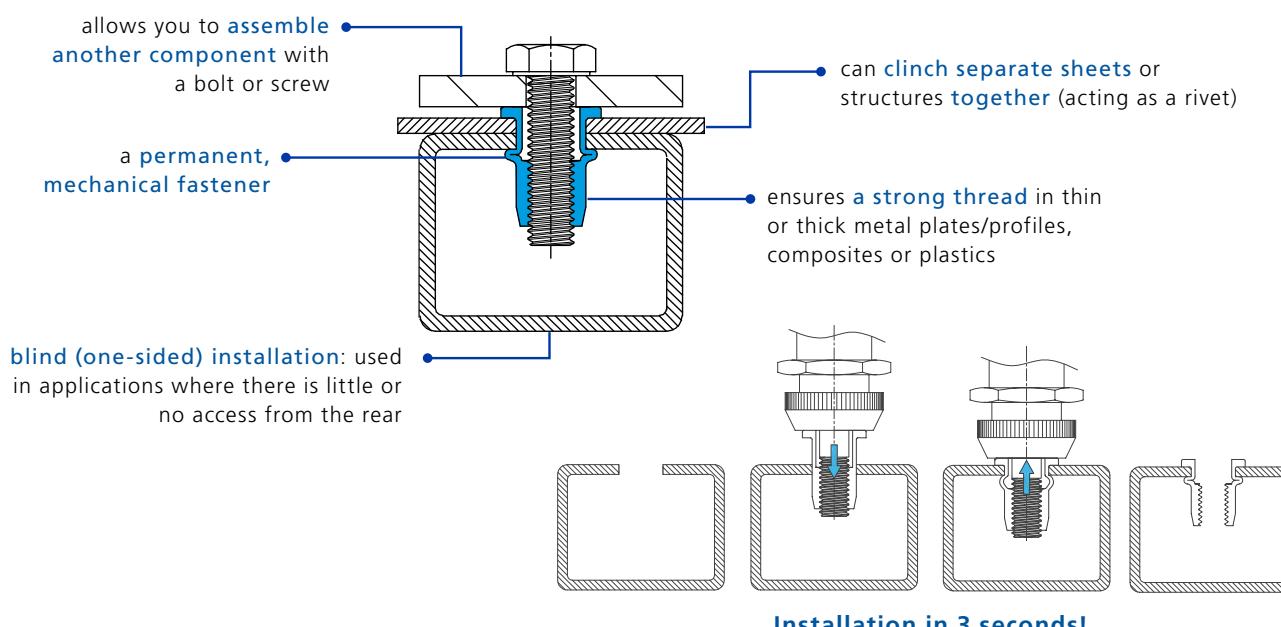

**TUBTARA®** is a mechanical fastener that ensures a strong thread in thin and thick metal plates / profiles, composites or plastics. It is used in applications where there is little or no access from the rear. It can clinch separate sheets together (acting as a rivet) and allows you to (dis)assemble another component with a bolt or screw.

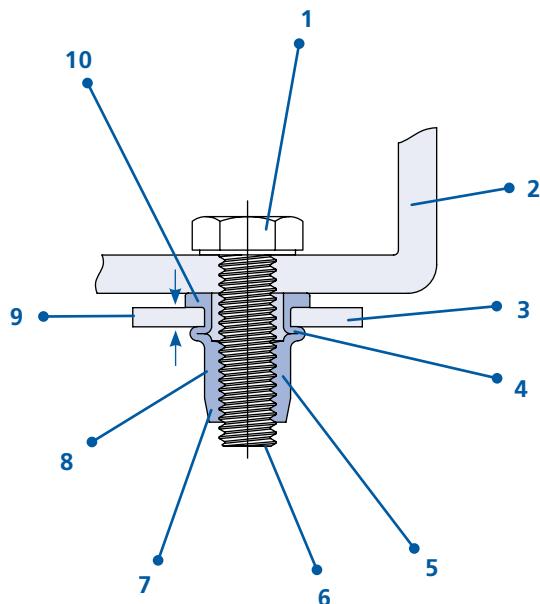

### ● Benefits

- Simple blind (one sided) installation
- Fast assembly time : the speed & ease of assembly reduces the cost of **TUBTARA®** versus other methods of providing threads in plates or profiles
- Low assembly costs
- Avoids damaging the surface of the workpiece: can be installed in pre-coated or pre-painted applications ensuring a clean undamaged thread
- No deformation of the workpiece
- No surface preparation
- Low installation cost : no expensive setting tools needed
- Works in close-to-edge applications
- Retained fastener cfr. machinery directive 2006/42/EC
- Appropriate for repeated assembly

### ● Installation

### ● Terminology

1. Screw or bolt inserted for assembly
2. Assembled part
3. Workpiece: can be 1 sheet or several sheets which have to be clinched
4. Bulb or counterhead: the chamber (unthreaded part) of the TUBTARA® deformed after setting
5. Strong, secured internal thread of the TUBTARA®
6. Open or closed end: closed end version prevents the ingress of dirt & fluids especially in combination with an underhead seal
7. Chamfer: leads the TUBTARA® into the hole
8. Shank: round, (semi-)hexagonal, knurled or splined version
9. Grip: the exact material thickness of the workpiece
10. Head: flat, countersunk, low profile, watertight, anti-turn or customized head types

### ● Product Description

Steel	M5	RS	UFO	40
Stainless	M10	H	SPX	35
Aluminium	M8	-	UPO	80
Steel	M6	-	MPO	50
Steel	M4	KN	UKO	30
↓ material	↓ thread	↓ shank	↓ head & shank	↓ max grip
		RS: splined H: hexagonal KN: knurled - : round	U / S: Unigrip M: Multigrip F: countersunk head P: flat head K: low profile head O: open end X: closed end	40 = 4 mm 35 = 3,5 mm 80 = 8 mm 50 = 5 mm 30 = 3 mm

### ● How to choose the appropriate TUBTARA® ?

- What kind of material and surface treatment do you need?
- What is the required thread size?
- Choose the correct griprange for the required material thickness of the application.
- Choose the required head and shank style.
- Do you need an open or closed end version?
- Check the technical characteristics of the chosen TUBTARA®.

We advise you to do some tests on the suitable product in the specific application beforehand.

Samples are available on request.

## ● Specials

Don't you find the appropriate **TUBTARA®** in this catalogue?

**TUBTARA® blind rivet nuts manufactured to customers' specifications, can be developed to suit the demands of almost every application.**

Always take the following into consideration:

- Give us an accurate description of the application.
- Do you have a drawing with indication of sizes, tolerances, material type and exact sheet thickness?
- Are there other special features and important remarks we need to know?
- Can you give us a sample of the application and/or present fastener?
- Do you have special technical requirements like torque value, upset load, tensile or thread strength etc.?
- What type of setting equipment will be used?

**Our R&D people will evaluate your request and our Sales Department will provide you with information.**

**Some examples of additional features providing innovative solutions for your problems :**

- Increased torque-to-turn / spin-out resistance
- Spacer function
- Controlled deformation
- (Full) integration into parent material (e.g. composites)
- Flush installation
- Seal function
- Visual identification
- Centering
- Search function (for automatic installation)
- Pressure spread
- Facilitate field repair (increased torque-to-turn resistance)
- Compatibility with fasteners
- Compatibility with tools
- Drip / dry function (paint, oil, ...)
- Blind installation / limited space
- Special thread requirements
- (Electrical) conductivity
- Increased push-out force
- Increased pull-out force (thread strength)
- Anti-vibration
- Customized grip (range)

Our brochure on customized solutions  
available in different languages

## Specials: Customized Solutions

### ● In-house R&D and technical support for specific applications

In 2014 Dejond has 60 years of experience in developing and manufacturing **TUBTARA®** blind rivet nuts. **TUBTARA®** has become synonymous with high quality performance, innovation, in-house R&D and technical support. Always one step ahead of industry demand.

Tubtara's manufactured to customers' specifications, are developed to suit the demands of almost every application. These customized solutions offer additional features to the standard **TUBTARA®** such as increased torque-to-turn, sealing, controlled deformation, integration into parent material, centering, pressure spread, compatibility with other fasteners or tools, special thread requirements etc. The Tubtara's designed for the latest aerospace programmes for instance are used in composite material and aluminium structures on wing parts and seats.

Besides blind rivet nuts, Dejond also concentrates on cold forming selected parts according to customers' drawings for very specific applications.

For a detailed summary, visit [www.tubtara.com](http://www.tubtara.com) and click on 'customized solutions'.

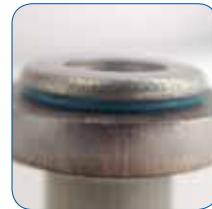

## Watertight (H)DPX TUBTARA®

Round or (semi-)hexagonal shank  
Flat head with underhead seal  
Open or closed end  
Stainless steel, steel and aluminum

(H)DPX

Watertight IP 67\*

### New watertight solution : **TUBTARA®** with seal under the head

#### ● Seal

The non-reactive peripheral seal, made of flexible organic based material, can be applied under the head of a **TUBTARA®**. It is resistant to many automotive oils, antifreeze and transmission fluids.

Most common type:

Material	Polyurethane	Reusability	yes
Colour	blue	Bead form	concave
Sealing capacity	> 150 bar	Cure method	heat cure
Temperature range	-40 +120 °C	Waterproof	IP67 *
Shore hardness	50 A range		

\*only guaranteed under Dejond test conditions – certificates available

#### ● TUBTARA® design

The underhead seal reassures an IP 67 waterproof Tuba-sheet assembly (if correctly installed). During installation of the **TUBTARA®**, the material is gap filling, forming a robust seal between mating surfaces.

The seal thickness varies. Compared to the same part without seal, this implies a reduced grip range and increased head height. Factors like seal thickness, hole size and setting force influence head height after installation (K2). See catalogue pages for K2 reference values.

The seal can be applied

- on Tuba's in stainless steel, aluminium and coated steel,
- to the underhead bearing surface of a flat head **TUBTARA®** (not recommended underneath countersunk or low profile heads),
- on Tuba's with round or (semi-)hexagonal shank, open or closed end, from M4 till M12.

#### ● Samples

For detailed product offer: see [pg 13](#), [pg 21](#), [pg 29](#) and [pg 35](#)

Samples, pricing, lead times and alternative seal options available on request.

## **Stainless watertight HX TUBTARA®**

Semi-hexagonal shank  
Flat head with underhead seal  
Closed end  
Stainless steel 304 & 316

HX

watertight  
10 bar (IP68)

## **Stainless watertight HX TUBTARA® successful up to pressure of at least 10 bar**

### ● Special HX head type

The watertight HX head ensures **metal-to-metal contact after setting, therefore assuring spin out resistance**. The concept guarantees a well functioning seal away from the possible burrs at the drilled hole in the plate (see photo 3). The underhead seal provides very good protection against ingress of fluids, moisture, oil or dirt even under high pressures up to at least 10 bar. IP 68 guaranteed under Dejond test conditions.

Standard o'ring seal material is NBR ([see pg 80](#)). Other materials are available on request.

### ● Applications

The HX **TUBTARA®** can be used in a wide variety of markets and applications.

### ● Samples

For detailed product offer: see [pg 20](#) and [pg 34](#).

The steel version of the watertight HX is a standard part available in Zinktop 480h (Cr<sup>VI</sup>-free) (see page [pg 50](#)).

## **Stainless steel TUBTARA® with Seal Inox®**

Semi-hexagonal or knurled shank  
Standard head types  
Open or closed end

## **Seal Inox® topcoat on stainless TUBTARA® prevents galling**

### ● What is Seal Inox®?

Seal Inox® is a topcoat that makes it easier to assemble stainless steel threaded parts. The integrated lubricant additive in this topcoat prevents gripping during assembly, also called 'galling'. Galling is caused by adhesion of two sliding surfaces under increased friction and often occurs between stainless steel threaded connections.

Characteristics :

- thin dry layer
- can be applied in single or two layers
- visually distinguishable grey treatment, other colours on request
- friction coefficient 0.09 – 0.14 (according to DIN EN ISO 16047)
- temperature resistance 180°C
- conforms to ELV and RoHS, Cr<sup>6+</sup> free

### ● Benefits of a Seal Inox® topcoat on stainless TUBTARA® blind rivet nuts

- reduces friction and prevents galling
- provides a higher clamping force
- reduces assembly time
- slows down contact corrosion
- protects against various chemicals e.g. chlorides, acids and oils
- can be applied on our different stainless steel qualities : 304, 316, 316Ti, 904L
- is preferentially applied on hexagonal or knurled Tubtara's since Seal Inox® will be present on both inside and outside surfaces, thus potentially reducing torque-to-turn for round Tubtara's.

Galling between a stainless bolt or screw and a stainless TUBTARA® can occur when the assembly is done with a power tool (often at high speeds), but also when the bolt or screw is assembled and tightened by hand.

### ● Availability

Seal Inox® is only applied to order (non-standard). Prices and lead times available on request.

## Stainless Steel A5 & A6

Standard shank versions  
Standard head types  
Open or closed end  
1st and 2nd grips

superior corrosion protection

## Cold formed TUBTARA® in high alloy austenitic stainless steel A5 and A6

### ● Material

Stainless steel A5 : 316 Ti – WNr 1.4571

Stainless steel A6 : 904L – WNr 1.4539

### ● Applications

- extremely demanding, chloride bearing applications where even A4 fasteners in stainless 316 offer insufficient corrosion protection
- A6 grade is also armoured against strong acid bearing environments
- civil engineering, tunnel infrastructures, ceiling panels in swimming pools etc.

### ● Important advantages

- improved corrosion protection, mainly thanks to considerable nickel and molybdenum content
- A6 guarantees increased protection against pitting and crevice corrosion, reaching a PRE (pitting resistance equivalent) value of 35 (compared to PRE 25 for stainless 316)

### ● Samples

Following samples available from stock: stainless A6 M6 UPO 30 – stainless A5 M8 UPO30 / M8 UPO 65 / M8 UFO 65 / M8 UKO 30 / M8 HUKO 30

Development of other dimensions upon request

## bigHead TUBTARA®

Extra large head  
Standard **TUBTARA®**  
Steel, stainless steel A2 & A4

for composite  
materials

## **TUBTARA®** with extra large head for mechanical joining of composites or strong anchor applications

### ● Design

A disc or oversized washer is welded onto a standard Tubtara blind rivet nut's head. Both the rivet nut and the disc can feature additional characteristics resulting in a wide product versatility. A customized design could incorporate additional shank features (knurl, hex), disc forms (square, cylindrical) or characteristics like a keyed head or underhead cross.

### ● Advantages for composite applications

- customized mechanical fastening solutions
- the oversized head provides a large bearing area
- the bigHead is ensuring a greater load distribution into the substrate, resulting in higher pull-out values
- with a perforated disc design, the Tubtara can lock securely into position, embedded or not
- installed quickly and tightly, despite burrs or uneven surfaced substrates
- is hole size tolerant
- allows easy inspection possibility
- requires minimal surface preparation and can be disassembled after installation

The collaboration between bigHead Bonding Fasteners Ltd. and Dejond results from a customer specific application in the marine industry.

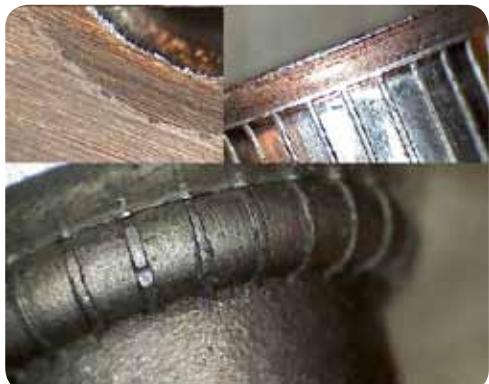

## TUBTARA® with improved knurls

Nominal, knurled shank  
Flat or low profile head  
Open or closed end  
Steel, stainless steel 304 & 316

**UPO & UKO KN**

improved  
nominal knurls

## TUBTARA® with improved knurl design and nominal diameter

Comparison of torque-to-turn reference values\* with  
Steel M6 UKO 30, low profile head and smooth shank:

Steel M6 UKO 30 KN	low profile head, improved knurl	+ 15 %
Steel M6 UPO 30	flat head, smooth shank	+ 30 %
Steel M6 UPO 30 KN	flat head, improved knurl	+ 45%
Steel M6 ATO 30	anti-turn head, round shank	+ 100%
Steel M6 HUPO 30	flat head, hexagonal shank	+ >300%

\* All Tubtara's set in a 1,5 mm thick steel HRB 55 plate  
Real values depending on setting conditions

### ● Benefits

Ensuring increased torque-to-turn resistance, resulting in up to **15% higher Nm** values compared to smooth shank parts (values depending on material choice & geometry)

### ● Design

- KN knurls are optimal in size and number to bite into soft (some aluminium grades) and even in hard (steel and stainless steel) base material
- contrary to the splined RS, the KN Tubtara has a nominal shank diameter
- the UKO KN version makes flush installation possible
- UFO KN programme in progress (knurls on shank and under the head)

### ● Samples

For detailed product offer: see [pg 14, pg 15, pg 43 and pg 44](#)

Samples of stainless M5 UFO35 KN available on request

## Setting equipment

A **TUBTARA®** can be set with a hand- or pneumatic tool, a press or an automatic installation unit.

### ● Hand tools to set blind rivet nuts

**DFS 307 T**

Compact & practical hand tool for light duty assembly.

**Capacity:**

Alu: M3 - M6

Steel: M3 - M5

**DFS 311 T**

Strong and reliable hand tool for heavy duty assembly in the field.

**Capacity:**

Steel & Alu: M6 - M12

Stainless steel: M6 - M10

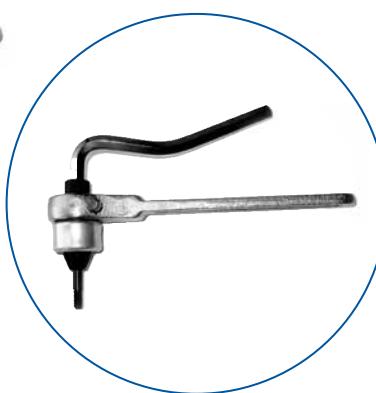

**NM 1**

Small hand tool for prototype work and repairs.

**Capacity:**

Steel & Alu: M4 - M12

Stainless steel: M4 - M6

## DFS 309 T

Heavy duty hand tool for field and low volume production use.  
Push and pull mechanism.

Capacity:  
All materials: M4 - M10

- **Spare parts available from stock**

- All parts for the current NM1 and DFS hand tools
- Add-on hex tooling to convert round holes into hexagon – can be used on standard setting equipment in the market

5059-9211	anvil M4 + lock nut
5059-9221	anvil M5 + lock nut
5059-9231	anvil M6 + lock nut
5059-9241	anvil M8 + lock nut
5059-9251	anvil M10 + lock nut
5059-9102	punch guide M4-M8

5059-9571	punch M4
5059-99641	punch M5
5059-99741	punch M6
5059-99821	punch M8
5059-9881	punch M10
5059-9111	punch guide M10

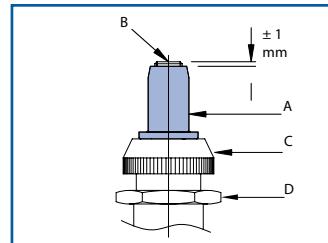

- Most spare parts for the following discontinued hand and pneumatic tools (until depletion of stock) : NM1 Kombi - NG2 - NG7 - NM9 - NM6 - NG6

## Setting method

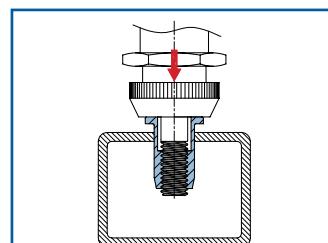

Select one of the **TUBTARA®** blind rivet nuts out of our productrange and a setting tool adequate for the application. Take a test workpiece and drill an appropriate hole

Screw the **TUBTARA®** (A) on the mandrel (B) of the setting tool. For an open version the mandrel should protrude about 1 mm, for a closed one until you feel resistance.

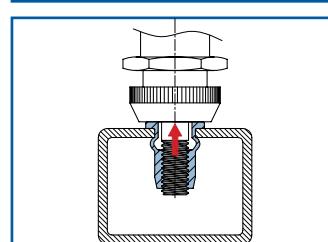

Screw the anvil (C) against the head of the **TUBTARA®** and block it with the locking nut (D).

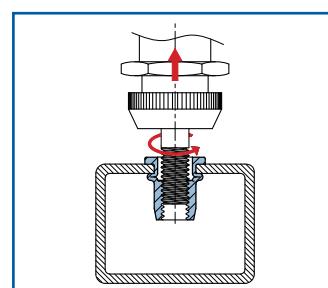

Introduce the **TUBTARA®** mounted on the setting tool, into the hole of the workpiece.

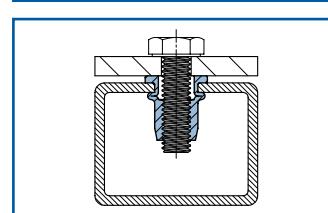

Set the **TUBTARA®**. The deformation chamber of the **TUBTARA®** is now forming the counterhead on the underside of the workpiece (bulb).

Unscrew the mandrel from the **TUBTARA®**.

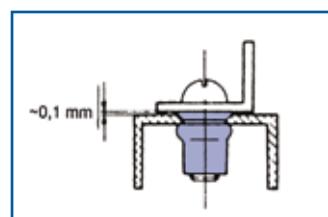

The **TUBTARA®** is set. Now you can easily insert your bolt or screw to assemble a component.

### ● Countersunk heads

When you use a **TUBTARA®** with a countersunk head, always countersink at 90° so that the head of the installed **TUBTARA®** protrudes about 0,1 mm above your workpiece. This ensures direct contact with the assembled component.

Don't you have the possibility to countersink?  
Use a low profile head!

## Materials

The **TUBTARA®** is available from stock in steel, aluminium and stainless steel 304 & 316.

For critical bearing environments, we can also offer the following solutions to cope with most environmental conditions :

- superior cold formed stainless A5 or A6 quality on demand,
- several finishing options on stainless like Cadmium, ZnNi, Seal Inox®,
- passivated stainless steel.

Available from stock:

Material			WNr
Aluminium	AlMg2,5	5052	3.3523
Steel	C8C	QST 34-3	1.0213
Stainless steel A2	304Cu		1.4567
Stainless steel A4	316Cu		1.4578

Available on request :

Material		WNr
Stainless steel A5	316Ti	1.4571
Stainless steel A6	904L	1.4539

Material specifications are always subject to modifications.

### ● How to choose the right material ?

A proper choice of the right material and coating of the **TUBTARA®** is very important to obtain optimal functionality during the whole life cycle, especially when environmental conditions are unknown or critical. Influences can be chemical (in water dissolved elements), abrasive (sand), heat, friction, contact with other metals, corrosive environments etc.

## ● Requirements & solutions

	Aluminium	Steel with appropriate coating	Stainless A2	Stainless A4	Stainless A5	Stainless A6
colour distinction		xxx				
visual identification		xxx				
weight-saving	xxx		x	x	x	x
durable	x	x → xxx	xx	xxx	xxx	xxx
easily recyclable	xxx	xxx	xxx	xxx	xxx	xxx
electrical conductivity	xxx	xx	xx	xx	xx	xx
high/low temperature properties	x	xx	xx	xxx	xxx	xxx
non-magnetic	xxx		x	x	x	x
increased corrosion resistance	xx	o	xxx	xxx	xxx	xxx
resistant to atmospheric exposure	xx	o	xxx	xxx	xxx	xxx
resistant to chloride atmospheres		o		xxx	xxx	xxx
resistant to polluted environments		o		xxx	xxx	xxx
resistant to harsh environments		o			xxx	xxx
resistant to process fluids		o			xxx	xxx
top coating possible		xxx				
passivation possible			x	x	x	x

Legend	
o	possible influence
x	small influence
xx	larger influence
xxx	largest influence

## ● Galvanic couples

A suited material choice is not always easy and all conditions should be taken into account. The table below shows some connection guidelines for corrosion:

base metal wherein Tubtara is set		Blind rivet nut material		
		zinc plated steel	aluminium	stainless steel 304 & 316
	aluminium			
	zinc plated steel			
	brass, copper	TT®	TT®	
	stainless steel 4xx	TT®	TT®	
	stainless steel 304 & 316	TT®	TT®	

Legend	
	base metal and <b>TUBTARA®</b> ok
	base metal corrodes where in contact with <b>TUBTARA®</b>
TT®	base metal ok but <b>TUBTARA®</b> will corrode
	corrosion base metal heavily increased by <b>TUBTARA®</b>

We strongly advise to do some tests in the specific application environment.  
 Samples are available on request.

## Coatings

A suitable coating choice can offer additional characteristics to your TUBTARA®.

### ● Coating on steel available from stock

#### Zinktop

High-quality Cr<sup>6+</sup> & Ni free plating  
Conforms with ROHS 2, Reach, ELV directives  
96 h white rust - 480 h red rust  
10µ ±2µ

### ● Survey available coating offer

photo	coating description	standard / on request	salt spray test (h) ISO 9227		colour / aspect	corrosion protection	RoHS / Reach compliant	remarks
			white rust	red rust				
1	Zinc blue/white Cr <sup>3+</sup>	REQ	24	72	blue/white	*	<input checked="" type="checkbox"/>	Cr <sup>6+</sup> free
2	Zinc black Cr <sup>3+</sup>	REQ	48	96	black	*	<input checked="" type="checkbox"/>	Cr <sup>6+</sup> free
3/4	Zinc yellow Cr <sup>6+</sup> *	ST	96	240	yellow	***	<input type="checkbox"/>	phase out 2017*
5	Zinktop	ST	96	480	light grey	****	<input checked="" type="checkbox"/>	Cr <sup>6+</sup> and Ni free
6	Zinktop Cobalt free	REQ	96	480	light grey	****	<input checked="" type="checkbox"/>	Cr <sup>6+</sup> , Ni and Co free
7	Ultra 1000	REQ	240	1000	matt grey	*****	<input checked="" type="checkbox"/>	Cr <sup>6+</sup> and Ni free
8	ZnNi (Zinc Nickel)	REQ	quality according to customer's specs					
9	Vibraseal®	REQ	x	x	red, green			seals + anti-vibration
10	Gleitmo®	REQ	x	x	-			friction reduction
-	Seal inox®	REQ	x	x	-			avoids galling stainless steel

The Ultra 1000 is more than doubling the resistance to red rust in the salt spray test compared to the standard Zinktop. The offer of blue and black trivalent coatings, as well as the Cobalt free Zinktop, are developed to tackle imminent Reach regulations and can be delivered on demand.

\* Zinc yellow Cr<sup>6+</sup> plating is no longer standard and has been omitted from this catalogue.  
Due to REACH phase out, production of steel yellow hexavalent chromated parts is being cut back, to discontinue completely latest March 21st, 2016 (latest application date).  
For availability, only until depletion of stock and not later than September 21st, 2017 (sunset date), please contact our customer service.

## ● Stainless Steel

All stainless steel Tubtara's have been treated by a special process to obtain a natural passivation layer, improving the corrosion resistance compared to common stainless steel parts in the market.

Optional coatings on stainless steel are

- Gleitmo® / Seal Inox®
- full passivation.

## ● Why use a coating ?

Requirements & solutions :

	Zinktop on steel	Coloured plating on steel	Passivation on stainless steel	Gleitmo®	Vibraseal®	Seal Inox®	Molykote®
appropriate visual aspects		+					
colour distinction		+			o	o	
to avoid galling				+		+	+
reduction of friction				+		+	+
increase of friction				-		-	-
to avoid galvanic couple	o	o	+		+	+	
electrical conductivity	+				-	-	-
anti-vibration function					+		
increased corrosion resistance	+		+			+	
seal function					+	+	
UV illumination				+			

Legend	
-	negative influence
o	possible influence
+	positive influence

We strongly advise to do some tests in the specific application environment.  
 Samples are available on request.

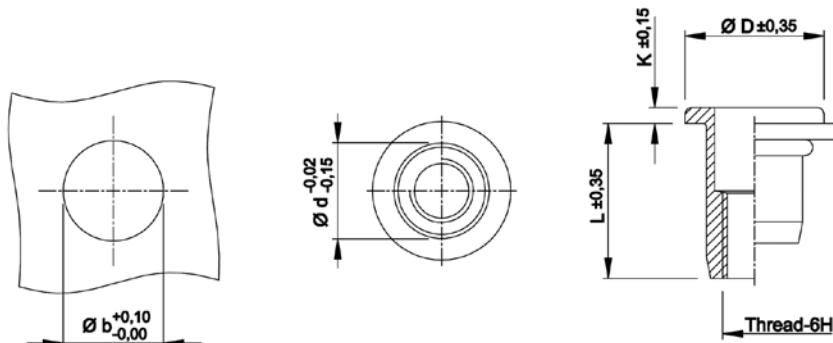

## Technical Data

### ● General tolerances

	Head form	Dimensions in mm	Dimensions in inches
D (head diameter)	Flat head Countersunk head Low profile head	$\pm 0,35$ 0 -0,5 -0,15 +0,3	$\pm .014$ 0 -.020 -.006 +.012
K (head thickness)	Flat head Countersunk head Low profile head	$\pm 0,15$ 0 +0,3 -0,05 +0,3	$\pm .006$ 0 +.012 -.002 +.012

Length under plate of open end parts: values obtained after setting.

To obtain the length under the plate after setting of [closed end parts](#), you can add the following sizes to the above-mentioned:

Steel and aluminium (mm)		Stainless steel (mm)	
M3	3,5	M4	4,5
M4	4,5	M5	6,0
M5	6,0	M6	7,0
M6	7,0	M8	8,0
M8	8,0	M10	7,0
M10	10,0		
M12	10,0		

In some cases the real length will be shorter. All dimensions can be checked on the technical data sheets in our catalogue.

**Variations due to setting and environmental conditions can be expected in practice.  
The values can be used as reference and optimized by using additional features.**

**Grip range influences**

The following values can be used as a guidance for other versions :

TYPE	Grip	ALUMINIUM			STEEL			STAINLESS STEEL 304 + 316

**Setting Force or Upset Load:** Force (in Newton) necessary to deform the TUBTARA® referred to in an adequate way.

**Upset Stroke:** Stroke (in mm) that should be set on the setting tool to give the TUBTARA® referred to, the adequate deformation.

**Pull-out or Ultimate Thread Strength:** Surpassing this ultimate force (in Newton), the thread of the set TUBTARA® will be pulled out.

The mentioned values are average reference values only.

We strongly advise the customer to do his own tests in the proper material thickness and specific application.

## ● Testing methods

In addition to the standard inspections during the production process the following tests can be done on customer's request :

- Pull-out test
- Maximum torque
- Push-out test
- Shear test
- Torque-to-turn
- Length under plate
- Size bulb forming

## ● HX TUBTARA® with seal under the head
